## Introduction to the handbook

A handbook is provided for each year of the programme, you may find it useful to skim the courses on topics available in later years. This handbook contains, amongst other things: comprehensive book/reading lists for the first year; important dates for the academic year; information about the undergraduate consultative committee (PJCC); and a list of people involved in organising the course. Please read this handbook thoroughly and refer to it frequently, as it will often contain the answers to many common questions.

### Other useful sources of information:

Full details about the Practical Course are given in the *Practical Course Handbook* at <http://www2.physics.ox.ac.uk/students/undergraduates>

Please refer to the *Physics and Philosophy Course Handbook* at <http://www2.physics.ox.ac.uk/students/undergraduates> for all details of the Physics and Philosophy course that are not covered in the *Physics Undergraduate Course Handbook*.

For particular information about College teaching, students should contact their tutors. Further information about the courses can be obtained from the Department of Physics website <http://www2.physics.ox.ac.uk/students/undergraduates> and from the Physics Teaching Faculty.

In this document, Michaelmas Term (MT), Hilary Term (HT), Trinity Term (TT), refer to Michaelmas (Winter), Hilary (Spring) and Trinity (Summer) Terms of the academic year, respectively. The weeks in each term are numbered as 1<sup>st</sup> week, 2<sup>nd</sup> week and so on, with 0<sup>th</sup> week being the week immediately before start of full term.

For full and up-to date information on lecture timetables, see [www.physics.ox.ac.uk/lectures](http://www.physics.ox.ac.uk/lectures).

The examination times given in this handbook are based on information available in September 2018. These may be altered and the definitive times are those published by the examiners; these will be posted on the official examiners' web page.

The Examination Regulations relating to this course are available at <https://weblearn.ox.ac.uk/portal/hierarchy/mpls/physics/teaching/undergrads/exammatters>. If there is a conflict between information in this handbook and the Examination Regulations then you should follow the Examination Regulations. If you have any concerns please contact the Assistant Head of Teaching (Academic) by e-mail at [carrie.leonard-mcintyre@physics.ox.ac.uk](mailto:carrie.leonard-mcintyre@physics.ox.ac.uk).

The information in this handbook is accurate as at **2 October 2018**, however it may be necessary for changes to be made in certain circumstances, as explained at <http://www2.physics.ox.ac.uk/students/undergraduates>. If such changes are made the department will publish a new version of this handbook together with a list of the changes and students will be informed.

## Important dates and deadlines

<b>Michaelmas Term</b>	<b>Event</b>	<b>Time</b>	<b>Location</b>
Week 0	Introduction to the Department (Induction)	Fri 14:15	Martin Wood Lecture Theatre & Dennis Sciama Lecture Theatre
Week 1	Laboratory Introduction	Mon 12:00	Martin Wood Lecture Theatre
Week 1	Safety Lecture	Mon 14:00	Martin Wood Lecture Theatre

<b>Hilary Term</b>	<b>Event</b>	<b>Time</b>	<b>Location</b>
Week 4	Entry for Prelims	Fri	*
Week 8	Last day to do practicals	Fri 10:00	

<b>Trinity Term</b>	<b>Event</b>	<b>Time</b>	<b>Location</b>
Week 1	Deadline for marking Practical work	Fri noon	
Week 3	Entry for Short Option choices	Fri	*
Week 7	Prelims examination		**

\* Students submit their entries via their College Office and Student Self Service.

\*\* See <https://www.ox.ac.uk/students/academic/exams/timetables> for the exam timetables.

\*\*\* See <http://www.physics.ox.ac.uk/lectures/> for lecture details.

## Introduction to the Department of Physics

### The Department of Physics

The Department of Physics at the University of Oxford, is one of the largest in the UK, with an average annual intake of about 180 undergraduates, of whom 165 study for a MPhys or a BA in Physics and 15 for a MPhysPhil in Physics and Philosophy. There is about 140 academic staff based in six sub-Departments: Astrophysics; Atmospheric, Oceanic and Planetary Physics; Atomic and Laser Physics; Condensed Matter Physics (including BioPhysics); Particle Physics and Theoretical Physics. These represent the main areas of research carried out in the Department.

The Department is located in **four** buildings shown on the map on page **2**: the Denys Wilkinson Building (DWB) on the west side of Parks Road; the Beecroft Building, Clarendon Laboratory and the Atmospheric, Oceanic and Planetary Physics Building on the east side of Parks Road. **You will need to use your University card to gain access to all physics buildings.** The Beecroft Building is a solely research building, and therefore not available for use by undergraduates.

### The Physics Teaching Faculty

All undergraduate teaching is arranged and organised in the Department by the Physics Teaching Faculty. Tutorials are arranged by College tutors. The Physics Teaching Office is located in the Clarendon Laboratory.

### Teaching Laboratories

All the undergraduate teaching laboratories are located on the lower two floors of the DWB, together with a reception area where undergraduates can meet and obtain refreshments; the entrance is from Keble Road down a flight of steps.

### Lecture Theatres

There are lecture rooms in all buildings, the main ones being the Martin Wood and Lindemann Lecture Theatres in the Clarendon Laboratory and the Dennis Sciama Lecture Theatre in the DWB. To enter the DWB, go up the wide concrete steps from Keble Road; turn left at the top and the entrance is facing you. Once inside, the lecture theatre is one floor up from the entrance. The current entrance to the Clarendon laboratory is from the Martin Wood Building where you will find the Martin Wood Lecture Theatre. The Lindemann Lecture Theatre is on the first floor.

### Libraries

College libraries are generally well stocked with the recommended physics textbooks, but if your library is without a book you need you should tell your tutor or your College librarian. A list of the books recommended by the lecturers is given in **Appendix A**. The Radcliffe Science Library (RSL) in Parks Road also has a comprehensive collection of physics books and journals and you may use this library, provided you have your University card with you.

## Computers

There are numerous computer workstations in the teaching laboratories on Level 2 of the DWB. Students can use the computers at any time during office hours including (during vacations). The Colleges all have computing facilities for their undergraduates and there is a University-wide network, which enables students to access Departmental sites, the practical course and the internet. Undergraduates will also receive an account and a College e-mail address on the University computing system. All new users will be asked to abide by the University Rules on the use of computers (see <https://www.ox.ac.uk/students/life>). Students should check their e-mails regularly, **at least once a day during term.**

## Policies and Regulations

The University has a wide range of policies and regulations that apply to students. These are easily accessible through the A-Z of University regulations, codes of conduct and policies available on the Oxford Students website [www.ox.ac.uk/students/academic/regulations/a-z](http://www.ox.ac.uk/students/academic/regulations/a-z). In particular, see the Policy on recording lectures by students (located here: <http://www.admin.ox.ac.uk/edc/policiesandguidance>)

## Social spaces and facilities

Students are allowed to use the Common Rooms in the Clarendon Laboratory and the DWB for meals and refreshments. There are vending machines in the reception area of the teaching laboratories in the DWB and in the corridor on the first floor of the Clarendon Laboratory between the Lindemann and the Martin Wood Lecture Theatres. **You may not take any food or drink into the lecture theatres, the teaching laboratories or near any departmental computers.**

## Data Protection

The Physics Department follows the general guidelines laid down by the University in regard to the provisions of the Data Protection Act 1998 (see <http://www.admin.ox.ac.uk/dataprotection/> for details.) Only student information relevant to the organisation of the physics courses is held by the Department.

## University Policy on Intellectual Property Rights

The University of Oxford has arrangements in place governing the ownership and exploitation of intellectual property generated by students and researchers in the course of, or incidental to, their studies. More details are available at <https://researchsupport.admin.ox.ac.uk/innovation/ip/policy>

## Copyright

Guidance about copyright is published at <https://www.ox.ac.uk/public-affairs/images/copyright>. The University holds a licence from the Copyright Licensing Agency (CLA) which permits multiple copying (paper to paper) from most copyright-protected books, journals, law reports, conference proceedings and magazines for use by students and the course tutor on registered taught courses and non-credit-bearing short courses.

## Good academic practice and avoiding plagiarism

“Plagiarism is presenting someone else’s work or ideas as your own, with or without their consent, by incorporating it into your work without full acknowledgement. All published and unpublished material, whether in manuscript, printed or electronic form, is covered under this definition.

Plagiarism may be intentional or reckless, or unintentional. Under the regulations for examinations, intentional or reckless plagiarism is a disciplinary offence” see [www.ox.ac.uk/students/academic/guidance/skills/plagiarism](http://www.ox.ac.uk/students/academic/guidance/skills/plagiarism).

The Teaching Faculty uses “Turnitin” as a tool that allows papers (projects) to be submitted electronically to find whether parts of a document match material which has been previously submitted. All work submitted will be checked with Turnitin.

See <https://weblearn.ox.ac.uk/portal/hierarchy/skills/generic/avoidplag> for an online course on avoiding plagiarism.

## Support for disabled students

“Disability is a much broader term than many people realise. It includes all students who experience sensory and mobility impairments, mental health conditions, long-standing health conditions, social communication conditions or specific learning difficulties where the impact on day-to-day life is substantial and long term.” [ref: Student Handbook 17-18] The Department is able to make provision for these students contact the Assistant Head of Teaching (Academic), the Disability Contact for the Department, about your requirements. See <http://www.admin.ox.ac.uk/eop/disab/> for more information. The *Examination Regulations* provides guidance for students with special examination needs. See the *Examination Regulations* <http://www.admin.ox.ac.uk/examregs/> for more information.

## Communications

Academic staff have pigeon holes in the building where they have an office and there is a messenger service that can be used to deliver mail between Colleges and Departments. Staff may also be contacted by telephone or by e-mail.

**All administrative information about the course and the examinations is sent to students by e-mail.** It is **essential** that students using e-mail accounts, other than their college account, [joe.bloggs@college.ox.ac.uk](mailto:joe.bloggs@college.ox.ac.uk), set the forwarding appropriately and check their e-mail regularly, **at least once a day during term**. Some important information from the Physics Teaching Faculty and University is sent to individual students by the messenger service, or is distributed via College Senior Physics Tutors. Notices about the examinations are posted on the official examiners’ web page <https://weblearn.ox.ac.uk/portal/hierarchy/mps/physics/teaching/undergrads/exammatters>.

## Student Life, Support and Guidance

Every College has their own system of support for students, please refer to your College handbook or website for more information on who to contact and what support is available through your College.

Details of the wide range of sources of support are available more widely in the University and from the Oxford Students website ([www.ox.ac.uk/students/welfare](http://www.ox.ac.uk/students/welfare)), including information in relation to

mental and physical health and disability. Students are encouraged to refer to [http://www.ox.ac.uk/current\\_students/index.html](http://www.ox.ac.uk/current_students/index.html) for further information.

Your College tutors provide advice about the Physics courses, and information is also available from the Physics Teaching Faculty Office.

### Complaints and appeals

If you have any issues with teaching or supervision please raise these as soon as possible so that they can be addressed promptly. In **Appendix D**, you will find precise details for complaints and appeals.

### Opportunities for skills training and development

A wide range of information and training materials are available to help you develop your academic skills – including time management, research and library skills, referencing, revision skills and academic writing - through the Oxford Students website <http://www.ox.ac.uk/students/academic/guidance/skills>.

### Employability and careers information and advice

The University Careers Service (at 56 Banbury Road) provides careers advice for both undergraduates and graduates (see <http://www.careers.ox.ac.uk>). One of their staff specialises in advising physics students. The service has excellent contacts with many employers, and maintains links with ex-Oxford students working in many different types of job. The Careers Service also has comprehensive details on post-graduate study in the UK or abroad). Information on research opportunities is also available from the sub-Departments of Physics and from tutors.

### Departmental representation - The Physics Joint Consultative Committee (PJCC)

The PJCC has elected undergraduate members who meet twice in Michaelmas Term and Hilary Term, and once in Trinity Term to discuss both academic and administrative matters with academic staff representatives. The Department values the advice that it receives from this committee for improving the quality of lectures, practicals and other aspects of the physics courses. The PJCC responsibilities include updating *The Fresher's Guide*, updating the PJCC web site and web pages linked to the Teaching pages. See <https://pjcc.physics.ox.ac.uk/>.

### Opportunities to provide evaluation and feedback

The **PJCC** organises the online distribution and collection of data from the electronic lecture feedback. See <https://pjcc.physics.ox.ac.uk/> for more information. These are a valuable source of information for the Department's Academic Committee, which organises the lectures and is in charge of the Physics courses. The feedback provided is used as part of the continuing review and development for Departmental, University and QAA quality assurance. Students are encouraged to make full use of the on-line management system for feedback on the practicals.

Students on full-time and part-time matriculated courses are surveyed once per year on all aspects of their course (learning, living, pastoral support, college) through the Student Barometer. Previous results can be viewed by students, staff and the general public at: <https://www.i-graduate.org/services/student-barometer/> Final year undergraduate students are surveyed instead through the National Student Survey. Results from previous NSS can be found at [www.unistats.com](http://www.unistats.com).

### Mathematical, Physical and Life Sciences (MPLS) Division and University Representation

Student representatives sitting on the Divisional Board are selected through a process organised by the Oxford University Student Union (OUSU). Details can be found on the OUSU website along with information about student representation at University level.

An undergraduate student, usually a student member of the PJCC, is a representative on the Undergraduate Joint Consultative Committee of the Division. More details can be found at <https://www.mpls.ox.ac.uk/intranet/divisional-committees/undergraduate-joint-consultative-forum>.

### Enterprise and entrepreneurship

Enterprising Oxford is an online map and guide to innovation and entrepreneurship in Oxfordshire, developed at the University of Oxford. Whether you have an idea, a start-up or a well and truly established venture, Enterprising Oxford highlights opportunities to develop further or help support others. See <http://eship.ox.ac.uk/> for more information.

### The Institute of Physics

This organisation offers a number of facilities for students through its 'Nexus' network. They also have information about careers for physicists. Students are encouraged to join the IoP, with membership free for undergraduates. See <http://www.iop.org/> for more information.

## The Physics Undergraduate Courses

### Aims and Objectives

Both the 3-year BA and the 4-year MPhys courses are designed to provide an education of high quality in physics, in a challenging but supportive learning environment, which will encourage all students to develop independent and critical habits of thought and learning. Both courses develop transferable skills related to communication, computing, and problem solving. Their aim is to ensure that, on graduation, all students will be in a position to choose from many different careers, and have the skills, knowledge and understanding to make a rapid contribution to their chosen employment or research area, and that those with the aptitude are prepared for postgraduate study in physics, and thus contribute to the vitality of UK research.

On completion of either course, students should have developed a thorough understanding and broad knowledge of the general theoretical and experimental scientific principles of physics, so that they have the resources to apply their knowledge to a wide range of physical phenomena. They should have learned the techniques required in a modern mathematically-based physics course, gained an understanding of the conceptual structure associated with the major physical theories, understood how to set up simple models of physical problems and learned a wide range of problem-solving skills, both analytical and computational, and how to apply them in contexts that may not be familiar. Students will also have learned the experimental techniques required by working physicists involving sound and safe procedures, how to record and analyse data and how to write accounts of laboratory work which can be clearly understood by other scientists, and will have investigated experimentally some of the most important physical phenomena.

On completion of their course, BA students will have gained some experience of working in a group on an open-ended assignment and all students will have had the opportunity either to acquire some expertise in a more specialised area of physics of their choice, or to broaden their education by study of a foreign language. MPhys students, in addition, will have acquired in-depth knowledge in two chosen specialisations within physics, and – from their project work – they will have learned how to plan and execute an open-ended piece of work, and will have gained experience of a research environment.

## Subject Benchmark Statements

“... a Subject Benchmark Statement for Physics, Astronomy and Astrophysics defines what can be expected of a graduate in the subject, in terms of what they might know, do and understand at the end of their studies.” [Ref. Quality Assurance Agency, 2017] More details at <http://www.qaa.ac.uk/>

## Department and College Teaching

The teaching of the courses is carried out through lectures, practical work in the laboratories, tutorials in the colleges (to which the academic staff are also attached), and classes.

There are comprehensive and challenging lecture courses, in which lecturers are allowed flexibility in their approach, which may lead to the inclusion of material reflecting developments in the field not contained in standard textbooks. Lectures are generally regarded as essential, but they are not in fact compulsory. Printed notes, problem sheets and other handouts frequently support them. Students need to learn how to take good lecture notes, and supplement them with their own private study, using textbooks and other sources recommended by the lecturers and their tutors.

Students are encouraged take their own notes or to amend handouts as they find appropriate. Teaching material, including lecture notes or handouts must not be made available on the web without permission. Publishing material, including your version of the notes, without permission, may be in breach of Copyright. Please note that all lecture notes are only available from the Oxford domain for students.

Physics depends on experimental observations, and learning how to perform and design experiments effectively is an essential part of physics education. Practical work is recorded in logbooks, and some practicals have to be written up. Termly progress reports on laboratory work are sent to College tutors. During the first three years practical work is compulsory; more details are given in the year-by-year sections.

The College-based tutorial teaching provides guidance on what to study, and in what order, coupled with week-by-week work assignments. These assignments are generally problems, with the occasional essay. This is a “Socratic” mode of instruction in which students’ understanding is rigorously and individually probed and expanded. College examinations (**Collections**) monitor students’ progress during the intervals between University examinations, and students are given regular reports on their progress.

For the more specialised Major Options in Part C of the MPhys course, tutorials are replaced by classes organised by the Department. Attendance at these classes is compulsory, and records are kept of students’ progress.

## Expectations of study and student workload (Term time and Vacations)

At Oxford, the teaching terms are quite short – they add up to about 24 weeks in one year. Students are responsible for their own academic progress and it is important that they manage their time appropriately.

A guide of a typical week\* for a undergraduate Physics student during term consists of:

- 8-10 hours in lectures
- 6-8 hours in lab, plus writing up time
- 2 hours of tutorials
- 20 hours of independent study

\* this is a guide only and this will vary between different students.

The University's expectation is that undergraduate students treat academic study as a full-time commitment during Full Term, with approximately 40 hours per week typically being spent on academic work. This is based on the expectation that these hours are spent on focussed work. Students should seek advice from their tutors if they find it impossible to meet their academic obligations without spending significantly longer than 48 hours per week on academic study on a regular basis.

During vacations it is essential that you set aside significant amounts of time for academic work. The course assumes that you will do this in preparation for College collections that are held at the end of 0<sup>th</sup> week. You should go over the tutorial problems and your notes, revising the material and supplementing it with information gained from tutorials and from your own reading. In addition to consolidating the previous term's work, there may be preparatory reading for the next term's courses. Your tutors may also set you some specific vacation work.

### Programme Specifications

Programme Specifications for the Physics courses and the Physics and Philosophy course can be found at <http://www2.physics.ox.ac.uk/students/undergraduates>

### Accreditation

The 3-year BA and the 4-year MPhys courses are accredited by the Institute of Physics.

### Accessing the Physics Teaching web pages

When you are away from Oxford, you may need to access materials on the web which are restricted. In the first instance, access to restricted resources from outside the Oxford network is provided via the Oxford University Computing Services (OUCS). See <http://www.ox.ac.uk/students/life/it/access>.

### Virtual Private Network (VPN) Service

A VPN connection provides your computer with a "virtual" connection to the Oxford network - it then behaves exactly as it would if you were actually on-campus. More information can be found at <http://www.oucs.ox.ac.uk/network/vpn/>.

For access to e.g. lecture notes, use your SSO (Single Sign-On) username (coll1234) with your WebLearn password.

## First Year 2018-2019

### Induction

All Physics and Physics and Philosophy first years are **required** to attend the Induction from 14:15 – 16:15 on Friday afternoon of 0<sup>th</sup> week of Michaelmas Term. There you will hear a brief introduction to Oxford Physics, an outline of the first year course, and addresses by a student representative of the Physics Joint Consultative Committee and by a representative of the Institute of Physics. There will also be an introduction to the Practical Course. The *Practical Course Handbook* is available from <http://www2.physics.ox.ac.uk/students/undergraduates>.

To keep the numbers manageable, students will be split by College into two groups; please check below which group you are in. Group A will start in the Dennis Sciama Lecture Theatre, Denys Wilkinson Building (DWB); Group B in the Martin Wood Lecture Theatre in the Clarendon (see map and directions on the inside cover). **All Physics and Philosophy students should join Group B.**

<b>Group A (Practicals usually on Thursdays)</b>	<b>Group B (Practicals usually on Fridays)</b>
Balliol, Brasenose, Exeter, Jesus, Magdalen, Mansfield, Merton, Queen's, Pembroke, St Catherine's, St John's, St Edmund Hall, Wadham, Worcester.	Christ Church, Corpus Christi, Hertford, Keble, Lady Margaret Hall, Lincoln, New, Oriel, St Anne's, St Hilda's, St Hugh's, St Peter's, Somerville, Trinity, University.

**Please note.** This grouping of Colleges also shows which day you will probably do practical work during the first year. (There can be some reassignment to even out numbers.)

### Safety Lecture

A safety lecture, which is **compulsory** for all Physics students, is held on the Monday of 1<sup>st</sup> week of Michaelmas Term at 14:00 in the Martin Wood lecture theatre. Only those who have attended and signed a safety declaration are allowed to carry out practicals.

**If for any reason it is not going to be possible for you to attend, tell your tutor, and email [labhelp@physics.ox.ac.uk](mailto:labhelp@physics.ox.ac.uk) before the beginning of 1<sup>st</sup> week.**

### Practical Work commencement

Practical work starts in the **FIRST** week of Michaelmas 10:00 on Thursdays and Fridays. Laboratories are allocated on a rota system. Details are given in the *Practical Course Handbook* available from <http://www2.physics.ox.ac.uk/students/undergraduates>. You should not arrange commitments that clash with your practical work; however, if the allocation raises genuine difficulties for you, discuss it with your tutor well before your practical work starts.

**You MUST prepare for practicals by reading the script, and any associated material the script may specifically reference, before you attend the laboratory. Any student who is not prepared may be asked to leave.**

An introduction to practical work is given on Monday of 1<sup>st</sup> week at 12:00 in the Martin Wood Lecture Theatre. Pairings for practical work will be registered at the Safety lecture. The *Practical Course Handbook* contains all the information you need about this part of the course. It is important to become familiar with it.

### Self-study modules in basic mathematics and mechanics

These are designed to bridge the gap between school and university maths, mechanics, statistics and data analysis. Your tutor has more information. See also '*The Language of Physics*' J. P. Cullerne and A. Machacek (Oxford).

### Introduction to Computer Programming

During the first half of Michaelmas Term, there will be introductory lectures on computer programming which will be coupled with the practical sessions on computing.

The Department has site licences for several powerful data analysis and mathematical software packages. See the *Practical Course Handbook* or the website for more information and how to download the software.

### Data Analysis and Statistics

Like computing, data analysis and statistics is taught through a set of introductory lectures which are linked to the practical classes. There is a half day introductory class specifically on data analysis at the start of MT and you will be expected to learn and develop your skills during the year's practicals.

At the end of the academic year we expect you to be familiar with how to analyse and express uncertainties on experimental measurements, and to be able to produce a competent plot of your data with an appropriate regression line. These skills are assessed in Prelims practicals and lab reports and will come up again as examinable material in Part A.

### Textbooks

A list of the books recommended by the lecturers is given in **Appendix A**. Your tutor will advise you as to what books you should obtain.

### First Year Physics and Maths Lectures

The syllabuses for papers CP1- 4 are given and those for the Short Options in in **Appendix C**. The timetable of all the lectures for Prelims is published at [www.physics.ox.ac.uk/lectures](http://www.physics.ox.ac.uk/lectures).

**Lectures start promptly at five minutes past the hour and end at five to.**

There are lectures covering material examinable in Prelims and others scheduled that should be attended; those on the analysis of experimental measurements contain important material for the practical course.

### Short Options

Short Options are intended to introduce either specialist topics or subjects outside the mainstream courses. They allow students to experiment with new material without significant prejudice to their

Choose from one of the Short Options S01, S02 or S03. The Short Option in Prelims is not subject to a resit, but is a required part of the examination and a good performance will help if you are on the borderline of a Pass or Distinction.

## Physics and Philosophy

There is a corresponding Handbook for this course: *Physics and Philosophy Course Handbook* see <http://www2.physics.ox.ac.uk/students/undergraduates>. Please refer to the *Physics and Philosophy Course Handbook* for all details of the Physics and Philosophy course that are not covered in the *Physics Undergraduate Course Handbook*.

The Physics and Philosophy course is run by the Joint Committee for Physics and Philosophy (P&P), which consists of three members of academic staff from each of from Physics and Philosophy, together with an undergraduate representative.

Physics and Philosophy is normally a 4 year course. The first year of the course leads to the examination called Prelims, which consists of five papers, three in mathematics and physics and two in philosophy. After successfully completing Prelims, students enter the Final Honour School (FHS) of Physics and Philosophy; further details are available in the handbooks for later years and the P&P Handbook.

The aims and objectives of the physics course, stated above, apply equally – where appropriate – to the Physics and Philosophy course. Additionally, the aim of the physics components in the Physics and Philosophy course is to provide an appropriate basis for the study of foundational and philosophical aspects of physical science, in particular of quantum mechanics and special relativity.

The first year course leads to the Preliminary examination in Physics and Philosophy, in which you take papers CP1, CP3 & CP4. The syllabuses for these papers are given in **Appendix C**. See the *Physics and Philosophy Course Handbook* for further details about Prelims, including details of the Philosophy papers.

The physics papers taken by Physics and Philosophy candidates are marked on exactly the same basis as those taken by Physics candidates (please refer to the section on **Examinations**). Guidelines to the assessment criteria in philosophy papers are given in the *Physics and Philosophy Course Handbook*

The Joint Committee for Physics and Philosophy has endorsed an algorithm for determining class boundaries, which is described at <https://weblearn.ox.ac.uk/portal/site/:mpls:physics:teaching:undergrads:examatters>.

## First Year Patterns of Teaching

### Timetable

The full Physics Undergraduate Lecture Timetable is located at [www.physics.ox.ac.uk/lectures](http://www.physics.ox.ac.uk/lectures). This will show you when lectures are scheduled for all years.

### Course structure

Four Compulsory Papers CP1, CP2, CP3, CP4 and a Short Option.

Most Colleges are able to do two classes or tutorials per week. Tutorials are done in pairs, or sometimes in threes. Classes are normally made up of all the students in that year in a College. There is approximately **one** tutorial or class per **four** lectures. As a guide, about **eight** hours of independent study are expected for each hour of tutorial or class teaching. Each Physics short option is covered by 12 lectures and examined in a 1½ hour paper

**Please note the total number of lectures is provided as a guide.** Numbers have been generated based on that ratio but there is no recommendation on balance of classes vs tutorials.

Students undertake 17 days of practical work.

Paper		Faculty Teaching	College Teaching
	Term	Lectures	Classes/Tutorials
<b>CP1: Physics 1</b>	MT	20	~10
Classical Mechanics and Special Relativity	HT	20	
	TT	4	
<b>CP2: Physics</b>	MT	17	~11
Electromagnetism, Circuit Theory and Optics	HT	24	
	TT	4	
<b>CP3: Mathematical Methods 1</b>	MT	32	~9
Complex Numbers and Ordinary Differential Equations	HT		
Vectors and Matrices	TT	4	
<b>CP4: Mathematical Methods 2</b>	MT	11	~10
Multiple Integrals and Vector Calculus	HT	26	
Normal Modes, Wave Motion and the Wave Equation	TT	4	
<b>Additional lectures</b>	MT	11	
	HT		
	TT	1	
S01: Functions of a Complex Variable	TT	12	
S02: Astrophysics: from Planets to the Cosmos	TT	12	
S03: Quantum Ideas	TT	12	

## Examinations

### The Preliminary Examination

The first year is a foundation year towards the end Trinity Term you will take the Preliminary Examination (Prelims).

Physics	Physics and Philosophy
Four Compulsory Papers CP1, CP2, CP3, CP4 Short Option paper and Practical Work	Three Physics papers CP1, CP3, CP4 Two Philosophy Papers

(i) Each of the compulsory papers will be in two sections.

Section A - containing short compulsory questions; Section B - containing problems (answer three from a choice of four). The total marks for sections A and B will be 40 and 60, respectively. The compulsory papers are individually classified as Pass and Fail, with a Pass mark of 40%.

(ii) One of the Short Options S01, S02 or S03 is chosen. These subjects will be covered by lectures at the start of Trinity Term.

(iii) The practical course requirement for Prelims is **17** days credit, made up of practicals, computing assignments and write ups. Candidates failing to complete their practicals will be required to complete them before entry to the Part A.

The current syllabuses for the Prelims are given in **Appendix C**. See **Appendix B** for information about the types of calculators which may be used in the Public examinations.

The examiners will take into account the performance in the whole examination (the four Compulsory Papers, the Short Option paper and Practical Work) when considering the award of a Distinction and when considering borderline scripts.

### Assessment of Practical Work

First Year (Prelims) practical work must be complete with an up to date computer record by noon on the Friday of 1<sup>st</sup> week of Trinity. The *Examination Regulations* read: "Failure to complete practical work under cl. 2(i), without good reason, will be deemed by the Moderators as failure in the Preliminary examination and the candidate will be required to complete the outstanding practicals either by examination or by completing them alongside second year study, before entry to the Part A examination will be permitted. In these circumstances, distinction at the Preliminary examination will not be possible."

### Examination Preparation

There are a number of resources available to help you. Advice is available from your College tutor and the Oxford Student Union. See <http://www.ousu.org/> for the Student Union.

### Examination Dates

After the examination timetables have been finalised they are available at <https://www.ox.ac.uk/students/academic/exams/timetables>.

## Year Outcomes for Prelims

Possible Year Outcomes	Descriptor
D (Distinction)	Pass with distinction and is allowed to continue to the second year (Part A).
P (Pass)	Pass and allowed to continue to the second year (Part A).
PP (Partial Pass)	One or two written papers have been failed and must be retaken at a subsequent examination.
F (Fail)	Three or four of the compulsory written papers failed <b>and/or</b> incomplete practical work. The compulsory written papers must be retaken at a subsequent examination.
F (Fail)	Three or four of the compulsory written papers failed and must be retaken at a subsequent examination.
F (Fail)	Incomplete practical work. The student may proceed into the second year <b>but</b> must complete outstanding practical work <b>before</b> entering the second year (Part A) examination.

Prelims do not count towards your final classification. Details relating to final degree classification can be found in the handbooks for later years.

### Resits

Failed compulsory papers can be re-taken in September. The University requires that these papers must be passed at no more than two sittings: see the *Examination Regulations* ('The Grey Book') for full details. There are no resit exams for Short Options and a poor mark will not lead to failure in Prelims, but good performance helps if you are on the borderline of a Pass or a Distinction.

### Examination Entry

Entry for the Prelims exam is at the end of 4<sup>th</sup> week of Hilary Term and 3<sup>rd</sup> week of Trinity Term for Short Option choices. Entries are made through your College and are usually organised by the College Secretary or College Academic Office, however it is your responsibility to make sure that your entry is made correctly. See <https://weblearn.ox.ac.uk/portal/site/:mpls:physics:teaching:undergrads:examatters>.

The *Examination Regulations* provide guidance for students with special examination needs. "... An application ... shall be made as soon as possible after matriculation and in any event not later than the date of entry of the candidate's name for the first examination for which special arrangements are sought." Please see The *Examination Regulations* <http://www.admin.ox.ac.uk/examregs/> for more information.

### Examination Regulations

The regulations for the Preliminary examinations are published in the *Examination Regulations* are published at [www.admin.ox.ac.uk/examregs/](http://www.admin.ox.ac.uk/examregs/).

## Examination Conventions

Examination conventions are the formal record of the specific assessment standards for the course or courses to which they apply. They set out how your examined work will be marked and how the resulting marks will be used to arrive at a final result and classification of your award. They include information on: marking scales, marking and classification criteria, scaling of marks, progression, resits, use of viva voce examinations, penalties for late submission or over-length work.

The Academic Committee is responsible for the detailed weightings of papers and projects. The definitive version will be published not less than one whole term before the examination takes place. The precise details of how the final marks are calculated are published on the Examination matters webpage at

<https://weblearn.ox.ac.uk/portal/hierarchy/mpls/physics/teaching/undergrads/exammatters>.

## Sitting your examination

Information on (a) the standards of conduct expected in examinations and (b) what to do if you would like examiners to be aware of any factors that may have affected your performance before or during an examination (such as illness, accident or bereavement) are available on the Oxford Students website ([www.ox.ac.uk/students/academic/exams/guidance](http://www.ox.ac.uk/students/academic/exams/guidance)).

Students are allowed calculators, except when the Examination Conventions published on the Examination matters webpage at

<https://weblearn.ox.ac.uk/portal/hierarchy/mpls/physics/teaching/undergrads/exammatters>

explicitly forbid their use in the examinations. The calculators must conform to the rules set out at "Regulations for the Conduct of University Examinations: Part 10 Dictation of Papers,..., Calculators 10.3..." at <http://www.admin.ox.ac.uk/examregs/2016-17/rftcoue-p10dopatuow-p-ccaominexam/> and the types of calculators which may be used in the Public examinations in **Appendix B**.

## Examination Results

After your examination, your tutor will be told the scaled marks that you obtained in each paper and your overall rank amongst candidates in Prelims. This information will not be published, but will be provided to enable your tutor to give you some confidential feedback and guidance. Students are able to view their examination results at <https://www.ox.ac.uk/students/academic/exams/results>. Marks displayed in the Student Self Service are given as percentages; e.g.

Assessment Unit Title	Assessment Unit No.	Assessment Type	Mark (%)	Grade
CP3 Mathematical Methods 1	A10285W1	Written	0-100	-
CP1 Physics 1	A10287W1	Written	0-100	-
CP2 Physics 2	A10288W1	Written	0-100	-
CP4 Mathematical Methods 2	A10289W1	Written	0-100	-
S1 Functions of a Complex Variable	A14120W1	Written	0-100	-
17 Days Practical Work	A15284L1	Practical	-	P (Pass) or F (Fail)

## Prelims Prizes

Prizes may be awarded for excellence in various aspects of Prelims

- Prelims Examination Prizes
- Physics Prelims Practical work prizes

Information about prizes available are normally published in the Examination Conventions for Physics and, Physics and Philosophy. Once prizes are awarded the prize list is published at <http://www2.physics.ox.ac.uk/students/undergraduates>

## Past Exam Papers

Past examination papers and the data sheet are available on the Physics webpages. See <http://www2.physics.ox.ac.uk/students> for more details.

## Examiners' Reports

The names of the examiners are published in the Examination Conventions see <https://weblearn.ox.ac.uk/portal/hierarchy/mpls/physics/teaching/undergrads/exammatters>. Students are strictly prohibited from contacting external examiners and internal examiners directly. If you are unhappy with an aspect of your assessment you may make a complaint or academic appeal (see <https://www.ox.ac.uk/students/academic/complaints>).

## Examination in further years

The FHS (Final Honour School in Physics), also called **Finals**, is taken in parts over the final two (BA) or three (MPhys) years of your course and you can look ahead to the details of these examinations by browsing the handbooks for those years are.

## Academic Progress

Departments and colleges have responsibility for monitoring academic progress (including the use of OxCORT). Colleges are responsible for monitoring academic progress of their undergraduate students.

## Appendix A Recommended Textbooks – First Year

(\*\* main text \* supplementary text) *Books listed as far as possible by Short Options and Examination Papers*  
*Lecturers will give more details at the start of each course*

### First Year

#### **Data analysis and Statistics**

'Measurements and their Uncertainties A practical guide to modern error analysis', Hughes, Ifan & Hase, Tom, (OUP 2010)

'Scientific Inference: Learning from Data', 'Simon Vaughan, Cambridge, 2013)

#### **CP1: Physics 1**

##### **Classical Mechanics**

'Classical Mechanics', M W McCall (Wiley 2001)

'Introduction to Classical Mechanics', A P French & M G Eison (Chapman & Hall) (Out of print but in most libraries)

'Analytical Mechanics', 6th ed, Fowles & Cassidy (Harcourt 1999)

'Fundamentals of Physics' (Chapters on Mechanics), Halliday, Resnick & Walker (Wiley)

'Physics for Scientists & Engineers', (Chapters on Mechanics) P A Tipler & G Mosca (W H Freeman)

'Introduction to Classical Mechanics', D. Morin (CUP)

'Classical Mechanics', T W B Kibble & F H H Berkshire (Imperial College Press)

##### **Special Relativity**

'Special Relativity', A P French, (MIT, Physics Series) [Nelson, 1968]

'Spacetime Physics', E F Taylor & J A Wheeler (Freeman, 1992) Several publishers including Nelson, Chapman & Hall.

'Introductory Special Relativity', W G V Rosser

'Lectures on Special Relativity', M G Bowler (Pergamon, 1986)

'Special Theory of Relativity', H Muirhead, (Macmillan)

'Introducing Special Relativity', W S C Williams (Taylor & Francis, 2002)

#### **CP2: Physics 2**

##### **Electronics and Circuit Theory**

'Electronics Circuits, Amplifiers & Gates', D V Bugg (A Hilger, 1991) \*\*

'Electronics Course Manual', G Peskett (Oxford Physics)

'Basic Electronics for Scientists and Engineers', Dennis L. Eggleston, CUP 2011, ISBN 0521154308 \*

##### **Electromagnetism**

'Electromagnetism', Second Edition, I S Grant, W R Phillips, (Wiley, 1990) ISBN: 978-0-471-92712-9\*\*

'Electromagnetism, principles and applications', P Lorrain & Dale R Corson, 2nd ed (Freeman) \*

'Electricity and Magnetism', W J Duffin, (McGraw Hill, 1990)\*

'Electricity and Magnetism, Volume 1 only : B.I.Bleaney and B.Bleaney, Third Edition (Oxford Classic Texts In The Physical Sciences), reissued 2013. (A more advanced text, but lots of good examples for reference).

## **Optics**

- 'Optics', E Hecht, 4th ed (Addison-Wesley, 2003) \*
- 'Optical Physics', A. Lipson, S. G. Lipson and H. Lipson, 4th ed (Cambridge University Press, 2011) \*
- 'Introduction to Modern Optics', G R Fowles, 2nd ed 1975 (still in print as a Dover paperback)
- 'Essential Principles of Physics', P. M. Whelan and M. J. Hodgson (any edition from the 1970s)

## **CP3 & CP4: Mathematical Methods 1 & 2**

### **Calculus**

- 'Mathematical Methods for Physics and Engineering: A Comprehensive Guide', K F Riley, M P Hobson and S J Bence (CUP, 2002), ISBN 0521-81372 7 (HB), ISBN 0521-89067 5 (PB) \*\*
- 'Mathematical Methods in the Physical Sciences', Boas \*
- 'All you ever wanted to know about Mathematics but were afraid to ask', L Lyons (CUP, 1995) \*

### **Vectors and Matrices**

- 'Mathematical Methods for Physics and Engineering: A Comprehensive Guide', K F Riley, M P Hobson and S J Bence (CUP, 2002), ISBN 0521-81372 7 (HB), ISBN 0521-89067 5 (PB) \*\*
- 'Mathematical Methods in the Physical Sciences', Boas \*

### **Ordinary Differential Equations and Complex Numbers**

- 'Mathematical Methods for Physics and Engineering: A Comprehensive Guide', K F Riley, M P Hobson and S J Bence (CUP, 2002), ISBN 0521-81372 7 (HB), ISBN 0521-89067 5 (PB) \*\*
- 'Mathematical Methods in the Physical Sciences', ML Boas

### **Multiple Integrals**

- 'Mathematical Methods for Physics and Engineering: A Comprehensive Guide', K F Riley, M P Hobson and S J Bence (CUP, 2002), ISBN 0521-81372 7 (HB), ISBN 0521-89067 5 (PB) \*\*
- 'Mathematical Methods in the Physical Sciences', Boas

### **Vector Calculus**

- 'Mathematical Methods for Physics and Engineering: A Comprehensive Guide', K F Riley, M P Hobson and S J Bence (CUP, 2002), ISBN 0521-81372 7 (HB), ISBN 0521-89067 5 (PB) \*\*
- 'Mathematical Methods in the Physical Sciences', Boas
- 'Advanced Vector Analysis', C E Weatherburn (1943)

### **Mathematical Methods**

- 'Mathematical Methods for Physics and Engineering: A Comprehensive Guide', K F Riley, M P Hobson and S J Bence (CUP, 2002), ISBN 0521-81372 7 (HB), ISBN 0521-89067 5 (PB) \*\*
- 'Mathematical Methods in the Physical Sciences', Boas\*
- 'Partial Differential Equations for Scientists and Engineers,' G Stephenson, 3rd ed reprinted 1998, Imperial College Press) \*\*
- 'Fourier Series and Boundary Value Problems', Churchill and Brown (McGraw-Hill) \*
- 'Intro to Mathematical Physics, Methods & Concepts', Chun wa Wong, (OUP) \*
- 'Mathematical Methods for Physics and Engineering', K F Riley, (CUP) \*
- 'Mathematical Methods of Physics', J Mathews and R L Walker, (Benjamin) \*

## Short Options

### **S01: Functions of a Complex Variable**

'Mathematical Methods for Physics and Engineering: A Comprehensive Guide', K F Riley, M P Hobson and S J Bence (CUP, 2002), ISBN 0521-81372 7 (HB), ISBN 0521-89067 5 (PB) \*\*

'Mathematical Methods in the Physical Sciences', Boas

'Mathematical Methods for Physicists', Arfken

'Complex Variables', Spiegel

### **S02: Astrophysics: from planets to the cosmos**

'Introductory Astronomy & Astrophysics', Zeilek & Gregory

'Universe', Kaufmann & Freedman

### **S03: Quantum Ideas**

'QED', R P Feynman (Penguin)

'Quantum Theory: A Very Short Introduction', J. Polkinghorne (OUP)

'The New Quantum Universe', T. Hey and P. Walters (CUP)

'The Strange World of Quantum Mechanics', Daniel F. Styer (CUP)

## Appendix B      Note on Calculators for ALL Public Examinations\*

The regulations are likely to follow recent practice which is:

A candidate may bring a pocket calculator into the examination provided the calculator meets the conditions set out as follows:

- The calculator must not require connection to any external power supply.
- It must not be capable of communicating (e.g. by radio) with any other device.
- It must not make a noise that could irritate or distract other candidates.
- It must not be capable of displaying functions graphically.
- It must not be capable of storing and displaying text, other than the names of standard functions such as 'sin' or 'cosh'.
- It must not be able to store programs or user-defined formulae.
- It must not be able to perform symbolic algebra, or perform symbolic integration or differentiation.
- Within the above, the calculator may be capable of working out mathematical functions such as  $\sin(x)$ ,  $\log(x)$ ,  $\exp(x)$ ,  $x^y$  and it may contain constants such as  $\pi$ .
- The examiners may inspect any calculator during the course of the examination.

### Notes:

These guidelines follow closely the regulations on the 'Use of calculators in Examinations' in the *University Examination Regulations* ('The Grey Book') and at [www.admin.ox.ac.uk/examregs/2016-17/rftcoue-p10dopatuow-p-ccaominexam/](http://www.admin.ox.ac.uk/examregs/2016-17/rftcoue-p10dopatuow-p-ccaominexam/) The exact requirements in a given year will be published by the Examiners. For some Prelims papers in Maths calculators are not allowed at all.

The intention of the rules is to prevent the possibility of a candidate obtaining an advantage by having a powerful calculating aid (or of reading stored information as a substitute for knowing it). It is appreciated that candidates may already own calculators that are excluded by these rules. In such a case the candidate is responsible for obtaining a more basic calculator that is within the rules, and for becoming familiar with it in advance of the examination.

**\* for the Physics papers when the use of calculators are permitted**

## Appendix C                      Syllabuses for the Preliminary Examination in Physics

### Introduction

*Compulsory papers: Each of the Papers CP1 - CP4 is a 2½ hour paper in two sections; Section A: Short compulsory questions (total marks 40) and Section B: Answer 3 problems from 4 (total marks 60)*

*Short Options will be examined by a single compendium paper divided into sections - one for each option - each containing 3 questions. Candidates offering **one** Short Option should attempt two questions from **one section** in 1½ hours. All questions are worth 25 marks.*

Syllabuses for CP1 CP2, CP3 and CP4 also

### **Preliminary Examination in Physics and Philosophy**

Syllabuses for CP1, CP3, CP4 and Part A Physics and Philosophy A2P (CP2 without Circuit Theory and Optics)

### CP1. Physics 1

Newton's law of motion. Mechanics of particles in one dimension. Energy, work and impulse. Conservation of linear momentum including problems where the mass changes, e.g. the motion of a rocket ejecting fuel. Conservation of energy.

Vector formulation of Newton's law of motion. Time-dependent vectors and differentiation of vectors.

Mechanics of particles in two dimensions. Equations of motion in Cartesian and plane polar coordinates. Simple cases of the motion of charged particles in uniform **E** and **B** fields.

Projectiles moving under gravity, including such motion subject to a damping force proportional to velocity. Dimensional Analysis.

Systems of point particles. Centre of mass (or momentum) frame and its uses. Torque and angular momentum. Conservation of angular momentum. Two-body collisions.

Central forces. Importance of conservation of energy and angular momentum. Classification of orbits as bound or unbound (derivation of equation for  $u=1/r$  not required; explicit treatment of hyperbolae and ellipses not required). Inverse square central forces. Examples from planetary and satellite motion and motion of charged particles under the Coulomb force. Distance of closest approach and angle of deviation.

Calculus of variations. Principle of stationary action (Hamilton principle). The Euler-Lagrange equation. Constraints. Application to particle motion in one and two dimensions. Small oscillations, normal coordinates. Compound pendulum. Conservation laws. Noether's theorem. The Hamiltonian and energy conservation.

Moment of inertia of a system of particles. Use of perpendicular- and parallel-axis theorems. Moment of inertia of simple bodies. Simple problems of rigid body dynamics. Angular impulse, collision and rolling. The concept of principal axes. Angular momentum and total energy in rigid body rotation.

## Special Relativity

Special theory of relativity restricted throughout to problems in one or two space dimensions. The constancy of the speed of light; simultaneity. The Lorentz transformation (derivation not required). Time dilation and length contraction. The addition of velocities. Invariance of the space-time interval. Proper time.

Energy, momentum, rest mass and their relationship for a single particle. Conservation of energy and momentum and the use of invariants in the formation sub-atomic particles. Elementary kinematics of the scattering and decay of sub-atomic particles, including photon scattering. Relativistic Doppler effect (longitudinal only).

## CP2. Physics 2

The treatment of electromagnetism is restricted to fields in vacuo. Vector operator identities required will be given on the data sheet. Complicated manipulations of vector operators will not be set.

## Electromagnetism

Coulomb's law. The electric field  $\mathbf{E}$  and potential due to a point charge and systems of point charges, including the electric dipole. The couple and force on, and the energy of, a dipole in an external electric field. Energy of a system of point charges; energy stored in an electric field. Gauss' Law; the  $\mathbf{E}$  field and potential due to surface and volume distributions of charge (including simple examples of the method of images), no field inside a closed conductor. Force on a conductor. The capacitance of parallel-plate, cylindrical and spherical capacitors, energy stored in capacitors.

The forces between wires carrying steady currents. The magnetic field  $\mathbf{B}$ , Ampere's law, Gauss' Law ("no magnetic monopoles"), the Biot-Savart Law. The  $\mathbf{B}$  field due to currents in a long straight wire, in a circular loop (on axis only) and in straight and toroidal solenoids. The magnetic dipole; its  $\mathbf{B}$  field. The force and couple on, and the energy of, a dipole in an external  $\mathbf{B}$  field. Energy stored in a  $\mathbf{B}$  field.

The force on a charged particle in  $\mathbf{E}$  and  $\mathbf{B}$  fields.

Electromagnetic induction, the laws of Faraday and Lenz. EMFs generated by an external, changing magnetic field threading a circuit and due to the motion of a circuit in an external magnetic field, the flux rule. Self and mutual inductance: calculation for simple circuits, energy stored in inductors. The transformer.

Charge conservation, Ampere's law applied to a charging capacitor, Maxwell's addition to Ampere's law ("displacement current").

Maxwell's equations for fields in a vacuum (rectangular co-ordinates only). Plane electromagnetic waves in empty space: their speed; the relationships between  $\mathbf{E}$ ,  $\mathbf{B}$  and the direction of propagation.

## Circuit Theory

EMF and voltage drop. Resistance, capacitance, inductance and their symbolic representation. Growth and decay of currents in circuits, time constant. The concept of complex impedance in steady-state AC circuit analysis.

Ideal Op-amp: inverting and non inverting amplifier circuits; summation, integration and differentiation circuits.

## Optics

Elementary geometrical optics in the paraxial approximation. Refractive index; reflection and refraction at a plane boundary from Huygens' principle and Fermat's principle; Snell's Law; total internal reflection. Image formation by reflection at a spherical boundary; concave and convex mirrors. Real and virtual images. Magnification. Image formation by refraction at a spherical boundary and by converging and diverging thin lenses. Derivation of the expression for the focal length of a thin lens. *[Non-examinable: Image formation by systems of thin lenses or mirrors as illustrated by: a simple astronomical telescope consisting of two convex lenses, a simple reflecting telescope, a simple microscope.]*

Simple two-slit interference (restricted to slits of negligible width). The diffraction grating, its experimental arrangement; conditions for proper illumination. The dispersion of a diffraction grating. (The multiple-slit interference pattern and the resolution of a diffraction grating are excluded.) Fraunhofer diffraction by a single slit. The resolution of a simple lens.

**Note: the above electromagnetism syllabus is also that for the Physics and Philosophy Part A paper A2P (Electromagnetism), excluding the sections on Circuit Theory and Optics.**

## CP3. Mathematical Methods 1

### Differential equations and complex numbers

Complex numbers, definitions and operations. The Argand diagram; modulus and argument (phase) and their geometric interpretation; curves in the Argand diagram. De Moivre's theorem. Elementary functions (polynomial, trigonometric, exponential, hyperbolic, logarithmic) of a complex variable. (Complex transformations and complex differentiation and integration are excluded.)

Ordinary differential equations; integrating factors. Second-order linear differential equations with constant coefficients; complementary functions and particular integrals. Application to forced vibrations of mechanical or electrical resonant systems, including the use of a complex displacement variable; critical damping; quality factor (Q), bandwidth, rms, peak and average values. *[Physical interpretation of complex impedance and power factor is not assumed]*

### Vector algebra

Addition of vectors, multiplication by a scalar. Basis vectors and components. Magnitude of a vector. Scalar product. Vector product. Triple product. Equations of lines, planes, spheres. Using vectors to find distances.

### Matrices

Basic matrix algebra: addition, multiplication, functions of matrices. Transpose and Hermitian conjugate of a matrix. Trace, determinant, inverse and rank of a matrix. Orthogonal, Hermitian and unitary matrices. Vector spaces in generality. Basis vectors. Scalar product. Dual vectors. Linear operators and relation to matrices. Simultaneous linear equations and their solutions. Determination of eigenvalues and eigenvectors, characteristic polynomial. Properties of eigenvalues and eigenvectors of Hermitian linear operators. Matrix diagonalisation.

## CP4. Mathematical Methods 2

Elementary ideas of sequences, series, limits and convergence. (Questions on determining the convergence or otherwise of a series will not be set.) Taylor and MacLaurin series and their application to the local approximation of a function of one variable by a polynomial, and to finding limits. (Knowledge of and use of the exact form of the remainder are excluded.) Differentiation of functions of one variable including function of a function and implicit differentiation. Changing variables in a differential equation, integration of functions of one variable including the methods of integration by parts and by change of variable, though only simple uses of these techniques will be required, such as  $\int x \sin x \, dx$  and  $\int x \exp(-x^2) \, dx$  The relation between integration and differentiation, i.e.  $\int_a^b dx \, (df/dx)$  and  $d/dx (\int_a^x f(x') \, dx')$ .

Differential calculus of functions of more than one variable. Functions of two variables as surfaces. Partial differentiation, chain rule and differentials and their use to evaluate small changes. Simple transformations of first order coefficients. (Questions on transformations of higher order coefficients are excluded.) Taylor expansion for two variables, maxima, minima and saddle points of functions of two variables.

Double integrals and their evaluation by repeated integration in Cartesian, plane polar and other specified coordinate systems. Jacobians. Probability theory and general probability distributions. Line, surface and volume integrals, evaluation by change of variables (Cartesian, plane polar, spherical polar coordinates and cylindrical coordinates only unless the transformation to be used is specified). Integrals around closed curves and exact differentials. Scalar and vector fields. The operations of grad, div and curl and understanding and use of identities involving these. The statements of the theorems of Gauss and Stokes with simple applications. Conservative fields.

### **Waves**

Coupled undamped oscillations in systems with two degrees of freedom. Normal frequencies, and amplitude ratios in normal modes. General solution (for two coupled oscillators) as a super-position of modes. Total energy, and individual mode energies. Response to a sinusoidal driving term.

Derivation of the one-dimensional wave equation and its application to transverse waves on a stretched string. D'Alembert's solution. Sinusoidal solutions and their complex representation. Characteristics of wave motion in one dimension: amplitude, phase, frequency, wavelength, wavenumber, phase velocity. Energy in a vibrating string. Travelling waves: energy, power, impedance, reflection and transmission at a boundary. Superposition of two waves of different frequencies: beats and elementary discussion of construction of wave packets; qualitative discussion of dispersive media; group velocity. Method of separation of variables for the one-dimensional wave equation; separation constants. Modes of a string with fixed end points (standing waves): superposition of modes, energy as a sum of mode energies.

## Data Analysis and Statistics

A- level Maths plus the bridging material in (a) data analysis and statistics and (b) computing are assumed.

- Qualitative introduction explaining what experiments are, what they are used for in science, and other relevant concepts such as hypothesis or model testing.
- The fundamental origins of experimental uncertainty, e.g. shot and Johnson noise
- Examples throughout the course, from contemporary physics or famous discoveries, discussing experimental design, technique, and instrumentation as well as data analysis
- Uncertainties in measurements including dominant error, random and systematic errors, accuracy and precision, derivation and use of error propagation formulae assuming independent, normally distributed errors (ie no covariance matrices).
- Gaussian and Poisson distributions (as the distributions found in first year practicals), central limit theorem, least squares fitting (including weighted), meaning of residuals, confidence limits, simple statistical tests.
- Practical implementation of the above in software and in data presentation, including
  - a) How to produce a plot (e.g. labels, units, title, expression of uncertainties etc.).
  - b) How to describe and present a numerical answer sensibly, with appropriate precision.
  - c) Other useful skills in physics such as estimation. A pragmatic approach to data analysis should be stressed.

This first year material is taught through a short lecture course and the practical course. It is continually assessed through practical work (i.e. through log book assessment, lab reports, and discussion with demonstrators). **As is usual, knowledge of the first year syllabus will be assumed in the second year, where it can be examined and/or encountered in practicals.**

## S01. Functions of a complex variable

Complex differentiation and definition of analytic functions, Cauchy-Riemann equations, orthogonal families of curves and complex mapping, conformal transformations and applications.

Complex integration, Cauchy's integral theorem and integral formula, Taylor series, isolated singularities and Laurent series, residue theorem and evaluation of real integrals, Jordan's lemma and other types of integral, branch points, branch cuts and Riemann surfaces, integration with cuts or with removable singularities, other selected applications of complex calculus.

## S02. Astrophysics: from planets to the cosmos

The limitations of astrophysics. The scale of the Universe. Motions of the Solar System bodies, Keplers laws. Detection and properties of exo-planets. The Sun as a star. Space weather. Physical properties of stars. Stellar structure. Energy generation, stellar lifetimes, star clusters. A qualitative view of star formation & evolution of low & high mass stars. End points of stellar evolution, white dwarf stars, supernovae, neutron stars & black holes, synthesis of the chemical elements.

The Milky Way: constituents & structure, central black hole, formation models. Properties of galaxies. The Hubble sequence. Active galaxies. The expanding universe, galaxy clusters, dark matter. Galaxy assembly. Large scale structure, the distance scale, cosmic microwave background, probes of dark energy, the hot big bang, age of the Universe, concordance cosmology.

[Note that knowledge of the prelims mechanics and special relativity courses will be assumed.]

## S03. Quantum Ideas

The success of classical physics, measurements in classical physics.

The nature of light, the ultraviolet catastrophe, the photoelectric effect and the quantisation of radiation. Atomic spectral lines and the discrete energy levels of electrons in atoms, the Frank-Hertz experiment and the Bohr model of an atom.

Magnetic dipoles in homogeneous and inhomogeneous magnetic fields and the Stern-Gerlach experiment showing the quantisation of the magnetic moment. The Uncertainty principle by considering a microscope and the momentum of photons, zero point energy, stability and size of atoms.

Measurements in quantum physics, the impossibility of measuring two orthogonal components of magnetic moments. The EPR paradox, entanglement, hidden variables, non-locality and Aspect's experiment, quantum cryptography and the BB84 protocol.

Schrödinger's cat, the Copenhagen and the many-world interpretation of quantum mechanics. The de Broglie Hypothesis and interferometry with atoms and large molecules. Amplitudes, phases and wavefunctions. The Schrödinger equation.

Interference of atomic beams, discussion of two-slit interference, Bragg diffraction of atoms, quantum eraser experiments. A glimpse of quantum engineering and quantum computing.

## Appendix D            Complaints and Appeals

### Complaints and academic appeals within the Department of Physics

The University, the **MPLS Division** and **Department of Physics** all hope that provision made for students at all stages of their course of study will result in no need for complaints (about that provision) or appeals (against the outcomes of any form of assessment).

Where such a need arises, an informal discussion with the person immediately responsible for the issue that you wish to complain about (and who may not be one of the individuals identified below) is often the simplest way to achieve a satisfactory resolution.

Many sources of advice are available from colleges, faculties/departments and bodies like the Counselling Service or the OUSU Student Advice Service, which have extensive experience in advising students. You may wish to take advice from one of those sources before pursuing your complaint.

General areas of concern about provision affecting students as a whole should be raised through Joint Consultative Committees or via student representation on the faculty/department's committees.

#### Complaints

If your concern or complaint relates to teaching or other provision made by the **Department of Physics**, then you should raise it with the Head of Teaching, **Prof Hans Kraus**. Complaints about departmental facilities should be made to the Head of Administration, **Mrs Nicola Small**. If you feel unable to approach one of those individuals, you may contact the Head of Department, **Prof Ian Shipsey**. The officer concerned will attempt to resolve your concern/complaint informally.

If you are dissatisfied with the outcome, you may take your concern further by making a formal complaint to the Proctors under the University Student Complaints Procedure (<https://www.ox.ac.uk/students/academic/complaints>).

If your concern or complaint relates to teaching or other provision made by your college, you should raise it either with your tutor or with one of the college officers, Senior Tutor, Tutor for Graduates (as appropriate). Your college will also be able to explain how to take your complaint further if you are dissatisfied with the outcome of its consideration.

#### Academic appeals

An academic appeal is an appeal against the decision of an academic body (e.g. boards of examiners, transfer and confirmation decisions etc.), on grounds such as procedural error or evidence of bias. There is no right of appeal against academic judgement.

If you have any concerns about your assessment process or outcome it is advisable to discuss these first informally with your subject or college tutor, Senior Tutor, course director, director of studies, supervisor or college or departmental administrator as appropriate. They will be able to explain the assessment process that was undertaken and may be able to address your concerns. Queries must not be raised directly with the examiners.

If you still have concerns you can make a formal appeal to the Proctors who will consider appeals under the University Academic Appeals Procedure (<https://www.ox.ac.uk/students/academic/complaints>).
