Department of Physics

ENTERPRISING WOMEN

Lunch and Learn

Hear from two enterprising and successful women, sharing their personal journeys into entrepreneurship and advice for students and researchers.

Ilana Wisby (CEO of Oxford Quantum Circuits (OQC)) gained a PhD in quantum physics, after which she entered the world of start-ups and is now leading an Oxford University spin-out company, creating the core of the quantum revolution.

Sophie Hackford (co-founder of 1715Labs, a spinout from Oxford University’s Physics Department) looks at how technologies change how we live, work, transact, love, by weaving together complex developments in quantum computing, AI, data, asteroid mining or virtual reality.

Open to all University of Oxford Students and Staff

(Lunch provided!)
